

Green Light:

A Correlation of Cancer Survivorship and Insurance Coverage in California Counties before the Affordable Care Act

1. Cancer Survivorship among California's Most Uninsured Counties:

Survivorship among Californians at 36 months after cancer diagnosis in counties with >30% non-elderly uninsured (2009-2013), compared to the California state average rate. [1, 2]

County	Breast Cancer	Prostate Cancer	Lung & Bronchus Cancer	Colon & Rectum Cancer	Melanoma Cancer
Alpine	●	●	●	●	●
Colusa	●	●	●	●	●
Glenn	●	●	●	●	●
Los Angeles	●	●	●	●	●
Madera	●	●	●	●	●
Monterey	●	●	●	●	●
Trinity	●	●	●	●	●
Tulare	●	●	●	●	●

2. Cancer Survivorship among California's Least Uninsured Counties:

Survivorship among Californians at 36 months after cancer diagnosis in counties with <15% non-elderly uninsured (2009-2013), compared to the California state average rate. [1, 2]

County	Breast Cancer	Prostate Cancer	Lung & Bronchus Cancer	Colon & Rectum Cancer	Melanoma Cancer
Marin	●	●	●	●	●
Placer	●	●	●	●	●
San Francisco	●	●	●	●	●
San Mateo	●	●	●	●	●
Santa Cruz	●	●	●	●	●

1. County levels of uninsured identified in *Fact Sheet: The California Health Care Landscape*. (2015) The Kaiser Commission on Medicaid and the Uninsured. Accessed at <http://files.kff.org/attachment/fact-sheet-the-california-health-care-landscape>, January 17, 2017.
2. County-level and statewide average cancer survivorship rates obtained from the Cancer Registry of Greater California.

Key: Percentage Surviving is ● better than the state average,

● same as the state average,

● worse than the state average, or

● cannot be determined from existing cancer data

The Cancer Registry of Greater California is a program of the Public Health Institute.

For more information about cancer registry data and its use in research, or to request cancer data for your study, visit the Cancer Registry of Greater California.
